The Session Will Begin Shortly

Customizing Dashboards with Visualizations and Input Filters

Kirsten Freeman

Software Engineer III

Agenda

- 1 Introduction
- 2 Visualizations
- 3 Input Filters
- 4 Customization Tools
- 5 Demo

Introduction

In this session, we will...

- Understand different ways to add Visuals to Dashboards
- Learn about Input Filters and how to use them
- Acquire tools we can use to make Dashboards more eye-catching
- See a demo!

What is a Dashboard?

- A Report that helps users analyze and understand trends and patterns in their data
- Shows a visual representation of data
- Can use tools such as Visualizations, Input Filters, and Panels
- Interactive and customizable
- A user-friendly way to learn about your data

Adding Data

Add Datasets to your Dashboard

- Ability to filter Datasets
- Can add multiple Datasets
- Can add the same Dataset more than once
 - Can filter these duplicate Datasets different ways
 - Apply different Input Filters to each Dataset

Visualizations

How to add Visuals to your Dashboard

- Add a specific type of Visual
- Add a Saved Visual from a Dataset
- Use Discover

Input Filters

- Elements used to interactively control data displayed on a Dashboard
- Users can focus on subsets of data
- Configurable
 - Configure new values on Input Filters to see how the data changes
 - Only apply Input Filters to certain Visuals
 - Personalize your Dashboard

Customization Tools

- **Panels**
 - **Group Visuals or Input Filters together**
- **Colors**
 - **Make insights pop to Users**
 - **Use colors consistently across data values**
- **Titles and HTML Visuals**
- **Sizing of Visuals**
 - **Put emphasis on certain Visuals**

Public Interactive Dashboards

- Share an on-premises Dashboard to the Cloud
- Allows your Dashboard to be public while maintaining security
- Coming soon!
