Interact, Analyze & Discover Your Data

JEN BRECHIN, Customer Success Manager

- 
- 1 Filtering Data
 - 2 Pivot Tables
 - 3 Discover
 - 4 Saved Visuals
 - 5 Snapshots

Filtering Data

Filters

+ NEW	<input type="text" value="Search"/>	Status ▼
Name ▼	Status ▼	Owner
 Political Science Majors	Private	 Administrator
 Females from Maryland	Public	 Administrator
 23/FA - Completed Apps Awaiting Decision	Public	 Administrator

- Filters can be created and applied to any Report or Dataset in the system
- Filters allows multiple users to use the same Dataset for different purposes
- Filters can be saved as private (only available to you) or public (available to anyone that has access to the Dataset)
- Filtering is done within Informer, not your database
- A Filter will limit the results without having to refresh the Query

Pivot Tables

- Pivot Tables can be created from Ad Hoc Queries and Datasets
- Unless you are the owner of the Report, the pivot table cannot be saved
- Pivot Tables can also be created as an element on a Dashboard
- Drilldown capability for a Pivot Table can be disabled if necessary. If allowing a drilldown, all fields are available as an option.

Rows: Country Columns: Current Status Values: SELECT

Country	Accepted	Moved to Student	Not Accepted	Incomplete
USA	1,981	802	670	602
Canada	5	6	12	14
United Kingdom	8		5	13
Turkey	2	2	10	11
Spain	2	1	11	8
Nigeria	5	1	6	6
Germany	2		8	9
Ghana			13	5
Pakistan	2			13
Poland			3	9
Hungary			7	4
Nepal	2		1	5
Ethiopia	2		2	3
India			2	3
Kenya	1			5
Sweden	2		3	2
	2,026	812	773	737

Discover

Discover is a way to get a head start on different Visuals that you can add to a Dashboard.

As you select from the list of available fields, Informer creates Visuals that it thinks you might want to see.

Visuals cannot be saved unless you are the Dataset owner. Otherwise, the results are temporary.

Saved Visuals

Visuals

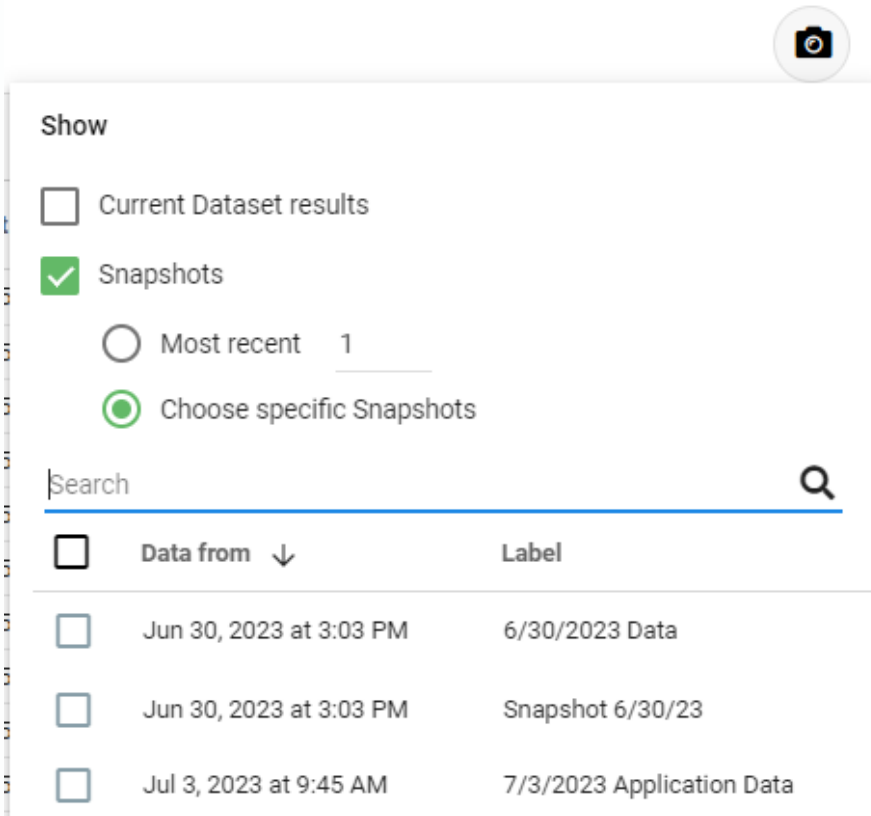

[+ NEW](#)

Visual ↑	Information ▼	Type ▼
 Applications by Start Term	Count	Stacked Column Chart
 Applications by State	Count	Map of Us-All
 International Applications	Count	Stacked Bar Chart

- Lists all Visuals saved by the Dataset owner
- All users with access to the Dataset and saved Visuals can perform the following actions:
 - Add a copy of the Visual to their homepage
 - Download the Visual
 - Customize their view of the Visual

Snapshots

- Snapshots create historical records of the data and how it existed at a certain point in time
- They are created by Dataset owners and are available to all users with access to the dataset
- Jobs can be configured to take a Snapshot each time the Job is executed (5.7.4 and later)
- Dashboards and Data view reports can utilize Datasets snapshots

The screenshot shows a user interface for selecting data snapshots. At the top right is a camera icon. Below it, the word "Show" is followed by three options: "Current Dataset results" (unchecked), "Snapshots" (checked with a green checkmark), and "Most recent 1" (radio button selected). Below these is another option "Choose specific Snapshots" (radio button selected). A search bar is located below the options. Underneath the search bar is a table with columns "Data from" and "Label". The table contains three rows of data, each with a checkbox in the "Data from" column.

<input type="checkbox"/>	Data from ↓	Label
<input type="checkbox"/>	Jun 30, 2023 at 3:03 PM	6/30/2023 Data
<input type="checkbox"/>	Jun 30, 2023 at 3:03 PM	Snapshot 6/30/23
<input type="checkbox"/>	Jul 3, 2023 at 9:45 AM	7/3/2023 Application Data
